

NUVAR® NC4 MISTY ROSE® P.V.R.

ORIGIN: cross of Concorde x Red Williams, UK, 2007

- Breeder: JRBreach, UK
- Licence holder: IFO

Very interesting variety for its colour, its eating qualities and its productivity potential.

THE TREE

TREE TYPE: rather upright tree, branches could be bent to optimise fruit production

PRODUCTIVITY:

- good yields (better than Williams, same level as Conference)
- time till first cropping: rapid (if branches are bent)
- susceptibility to alternate bearing: low, regular cropping

VIGOUR: average

BLOSSOM: Conference

POLLINATED BY: Conference, Williams, Comice

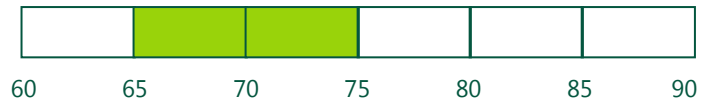

THE FRUIT

MATURITY: 10 days after Comice, 3 weeks after Conference

FRUIT / FLESH:

- fruit: purple red at harvest and orange red after storage
- flesh: good eating quality with nice Williams flavours

FRUIT SIZE:

STORAGE: to be stored preferably in negative cold store (-0,5 / -1°C)

- December in normal cold store
- end of January / beginning of February in negative cold store
- controlled atmosphere: to be determined
- ripening period needed
